DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 6 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by DiStefano et al. (U.S. 5,558,928).

See Figure 2, elements 48, 38 and 42 and col. 11, lines 25-65. No particular weight is given to the electrostatic particle intended use as the instant claimed structure appears identical to that taught by the reference.

3. Claims 1, 6 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Zohni (U.S. 6,380,060).

Art Unit: 1772

See Figure 2A, col. 3, lines 45-55. No particular weight is given to the electrostatic particle intended use as the instant claimed structure appears identical to that taught by the reference.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claims 1-15 rejected under 35 U.S.C. 103(a) as being unpatentable over Chrai et al. (U.S. 6,303,143 B1) in view of Zohni (U.S. 6,380,060 B1).

Chrai et al. teaches in Figure 15, a dielectric layer with an electrode in an aperture and under an aperture, the layer being used as an electrostatic substrate to deposit particles such as drugs and other substances (col. 7, lines 30-65). Zohni teaches the use of conductive polymers as electrodes in dielectric substrates (col. 3, lines 45-55). The instant invention claims a dielectric substrate for electrostatic

deposition with polymer film electrodes in apertures and under apertures in dielectric films. It would have been obvious to one of ordinary skill in the art to use conductive films in the apertures of Chrai et al. in order to form electrodes because of the teachings of Zohni.

6. The disclosure is objected to because of the following informalities: the element numbers in the specification for Figure 3 do not agree with the element numbers on the drawings.

Appropriate correction is required.

Applicant is also requested to update the status of the numerous applications referenced in the body of the specification.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references show various electrostatic particle deposit systems.
